Figure 1 - Co-coverage of health interventions: percentage of children aged 1–4 years according to the number of key child-survival interventions received, by wealth quintile.

Figure 2 - Coverage levels in the poorest and richest quintiles for selected interventions along the continuum of care.

Figure 3 - Coverage levels in the poorest and richest quintiles for selected interventions along the continuum of care.

Figure 4 - Composite coverage of selected interventions and corresponding coverage gap (how much is needed to reach universal coverage), by wealth quintile.
