Table - Coverage of interventions at national level and by key equity stratifiers. Please see the example cover profile for guidance on interpreting the table and graphs.

Wealth quintiles:
- Poorest 20%
- Richest 20%

Coverage levels are shown for the poorest 20% (red circles) and the richest 20% (yellow circles). The longer the line between the two groups, the greater the absolute inequality.

Source: Benin DHS 1996 & DHS 2006

The horizontal line connects the richest (yellow circles) and poorest (red circles) quintiles. The longer the line between the two groups, the greater the absolute inequality. For quintiles with small sample sizes, estimates are not shown in the graphs.

Figure 1 - Coverage levels in the poorest and richest quintiles for selected interventions along the continuum of care.

Figure 2 - Coverage levels in the five wealth quintiles for selected interventions along the continuum of care.

Figure 3 - Co-coverage of health interventions; percentage of children aged 1-4 years according to the number of key child-survival interventions received, by wealth quintile.

Figure 4 - Composite coverage of selected interventions and corresponding gap (how much is needed to reach universal coverage), by wealth quintile.
