### Figure 1 - Coverage levels in the poorest and richest quintiles for selected interventions along the continuum of care.

#### Figure 2 - Coverage levels in the five wealth quintiles for selected interventions along the continuum of care.

Source: Central African Republic (DHS 1994 & MICS 2010)

Coverage levels are shown for the poorest 20% (red circles) and the richest 20% (yellow circles). The horizontal lines connect the richest (yellow circles) and poorest (red circles) quintiles.

The longer the line between the two groups, the greater the absolute inequality. For quintiles with small sample size, estimates are not shown in the graphs.

### Figure 3 - Co-coverage of health interventions: percentage of children aged 1-4 years according to the number of key child-survival interventions received, by wealth quintile.

- **Family planning need satisfied**
- **Antenatal care (4+ visits)**
- **Skilled birth attendant**
- **Early initiation of breastfeeding**
- **Insecticide-treated bednet - child**
- **DTP3 vaccine**
- **Measles vaccine**
- **Vitamin A and IFA tablets**
- **Oral rehydration therapy**
- **Careseeking for pneumonia**

Wealth quintiles: Q1: poorest 20% Q2: Q3: Q4: Q5: richest 20%

Source: Central African Republic (DHS 1994 & MICS 2010)

The co-coverage of selected interventions and corresponding coverage gap (how much is needed to reach universal coverage) by wealth quintile.
