Source: Mozambique (DHS 2003 & DHS 2011)

Coverage levels are shown for the poorest 20% (red circles) and the richest 20% (yellow circles). The larger the line between the two groups, the greater the absolute inequality. For quintiles with small sample sizes, estimates are not shown in the graphs.

Figure 1 - Coverage levels in the poorest and richest quintiles for selected interventions along the continuum of care.

Figure 2 - Coverage levels in the five wealth quintiles for selected interventions along the continuum of care.

Figure 3 - Co-coverage of health interventions: percentage of children aged 1-4 years according to the number of key child-survival interventions received, by wealth quintile.

Figure 4 - Composite coverage of selected interventions and corresponding coverage gap (how much is needed to reach universal coverage), by wealth quintile.
